Summary

I am an undergraduate with a strong interest in full stack, backend and frontend development. I enjoy building real world applications using Java, Spring Boot, React, and MySQL, and have hands on experience developing complete systems with authentication, role-based access, and database integration. I have solved over 600 programming problems across platforms, which has strengthened my problem-solving skills and understanding of data structures and algorithms. I am continuously learning new technologies and aim to contribute to impactful software projects while growing as a developer.

Education

2023 - 2027

K.S. Rangasamy College of Technology
Undergraduate • B.Tech • Information Technology
Percentage - 83.6% • CGPA - 8.56
Maintaining a strong academic record while gaining hands-on experience in programming, data structures, databases, and full-stack application development.

Certification

Practical Problem Solving with Algorithms

Skills

- Java
 - Spring Boot
 - Python
 - Flask
 - HTML
- CSS
 - Javascript
 - React Js
 - MySQL
 - Machine Learning

Projects

Hostel Management System

 Jun 2025 – Jul 2025

 [Project Link](#)

A full-stack web application built using Spring Boot, MySQL, React.js, and Firebase Authentication to manage hostel operations in a college. Implements role-based login for Students and Wardens, offering personalized dashboards and features. Students can view room details, submit/view complaints, check mess menu, request parent visits, and track fee status. Wardens manage students, update mess menus and fee statuses, approving out passes, handle complaints, and control visitor entries.

RK ServeHub

 Mar 2025 – Mar 2025

 [Project Link](#)

A full-stack restaurant web application developed using React, Spring Boot, and MySQL. Features include section-based navigation, dynamic food menu filtering, and a real-time reservation form. Integrated JavaMailSender for automated email confirmations to enhance user experience.

Banking System

 Mar 2024 – Apr 2025

 [Project Link](#)

A full-stack web application built using Spring Boot, React, and MySQL to manage banking operations. Key features include account creation, deposit, withdrawal, balance inquiry, fund transfer, and account deletion. Ensured real-time balance updates and data consistency through backend transactions and React state management.
